1. Bitcoin does not permit lies, we can trust in bitcoin
2. Bitcoin ignores all artificially created borders and unites all countries & religions
3. Bitcoin is the first consensus in human history, based on voluntarism
4. Bitcoin grows on collaboration, competition has no space in bitcoin

<http://barriobitcoin.com>

1. I have spent only 5 euro fake money within the last 81 days, to wash my clothes, as these automatic machines do not permit negotiations.
2. We have a voice which we are expressing every day, our consumption is our vote, politics are a theatre from the past, which are directed by the economy anyway.
3. Once the population realizes that people are really using bitcoin in every day consumption, they will start acting in the same way, humans are herd animals, we are one family, we know what is right and wrong by instinct.
4. People have enormous fears, psychological barriers, which we have to tackle with our trust, we have to show them that we believe it is possible.
5. Most people have lost hope, they believe in conspiracy ruling the world, they are forced to lie, they have fear of their neighbors, because they drink alcohol, watch television and read newspaper, instead of honestly talking to their neighbors and opening up to the real community/family surrounding them.

What is fake money? (dollars & euros)

Fake money can be printed or created without permission of the community. Fake money does not represent the community.

Fake money is intransparent, nobody knows how much fake money exists in the world and since a few decades fake money can be produced by clicks on the computer.

Fake money supports corruption, the only reason we have corruption in our society is because we allow it. We create corruption by using a corrupt fake banking system based on lies.

Fake money is based on lies and needs media propaganda to survive, fake money is not actually supported by the people, fake money is only used because there was no other choice in the past.

Why is fake money a problem?

Fake money created the extremely high rent prices, a normal worker today pays half or more of his salary for the rent.

Fake money tricked people by their emotions/deepest desires to have a family and children. Fake money got people to believe its worth working 20 years to pay off a place to sleep.

Fake money allowed people to buy something they dont really own and let them pay double the price in the end. Debt based fake money loans.

Fake money tricked people, it is like heroin or cocaine, fake money can give the illusion of power, but fake money enslaves your kids in the end.

Fake money allowed some business people in society to get cheap loans to enslave others, while others pay extremely high interest rates for the same.

What is a human soul?

Human means that we have instincts which are more important than economic decisions. Humans have a soul, we need each other to survive.

We know that killing is wrong, we all want to live in peace and harmony, nobody likes to fight. We have built EVERYTHING around us TOGETHER.

We all like company, humans are one family which should not kill each other under any circumstance. We like to support and help each other.

Fights are extremely stressful and waste a lot of energy, which humans actually would need to grow their consciousness or spend time loving and caring.

Bitcoin creates the first world society based on trust, we trust each other more than we trust in any authority which has misguided and manipulated us.

Bitcoin says, that there is nothing more important in the world than honesty based on transparency (like in any family it is the case).

Our voice matters, we have the power

Every day we make the decision to keep supporting the banking system, which has officially robbed the EU in 2008.

Every day which we are not using Bitcoin we are accepting that this system stays as it is, because if we are not changing our behaviour, why should the world change their behaviour?

Bitcoin returns the power to the people, as we now have the voice to express that we do not want to participate in the global warfares and the never ending slavery based on fake money.

Every day more and more people join Bitcoin, this human evolution is unstoppable because it expresses our deepest desire.

Bitcoin is already dominating the world

I am very positive that Bitcoin is already dominating the world.

There are people still living in the past, not using Bitcoin in every day transactions, its the same every time new technology pops up.

If we all had realized how easy it is to make an online shop in 2001, we would all not be working anymore and right now we would earn Bitcoin

If we all had realized the power of smartphones in 2009, we would all be app developers today, to realize our power to influence the world.

Now is the time to realize, that Bitcoin can not be stopped, it is already dominating the world and everyone who shuts himself out of this experience is loosing time and resources.

Fake Bitcoins popping up everywhere

All cryptos except Bitcoin have proven to be centralized scams

Litecoin owner already sold all his shares and publicly stated this to make fun of the whole crypto community.

Ethereum owner already sold 2/3 of his shares, he started selling years ago already, when he realized that Ethereum is totally overpriced, as it is an extremely buggy project which has failed several times, made up by a 19 year old kid without programming experience, totally centralized

Ripple is the biggest scam ever seen in crypto and nobody is actually holding it, price artificially pumped with fake money

Freedom to our political prisoners

Freedom to Julian Assange

Freedom to Edward Snowden

Freedom to Ross Ulbricht

Freedom to Kim Dotcom

Freedom to all journalists and political prisoners

Freedom to all plants and our mother earth
